The dots on the chart are correct within an average 0.005 square millimeters or 10%, whichever is larger. The tolerance of +/- 0.005 square millimeters is applied to the 0.02 - 0.05 dots. The remained of the dots have a +/- 10% applied to them.

Calibration of the Micro Vu Vertex (model number - 311UC, SN - VX311UCO1508) is performed in accordance wih the procedures set forth in Micro Vu's Calibration Guide for Measureing machines (1997) and complies with relevant requirements of ANSI/NSCL Z540-1 and ISO/IEC 17025-standard calibration date-8/2018

*The chart is made from photographic film; the dots are photographic emulsion that can be damaged if abraded. The chart should be visually inspected for physical damage to the measurement dots before each use. The chart should be replaced every 2 years of use.*

*Recommend environmental conditions for the storage and use of the chart: relative humidity 50% +/-10%, temperature 75 degrees +/- 5 degrees F. The film can change size very slightly under extreme temperature and relative humidity conditions. The recommend environmental conditions for the storage are guidelines; the film is dimensionally stable in normal working environments. The charts should be stored in a dustproof package.*
